SUN SAFETY IS
FOR EVERYONE

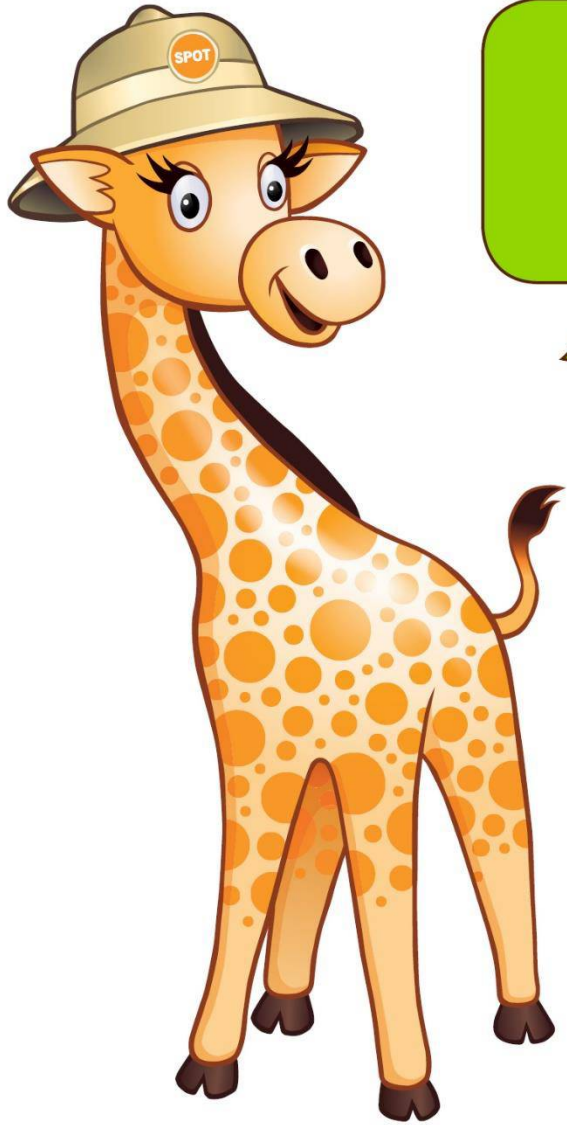

Hi, I'm Gigi
the giraffe!

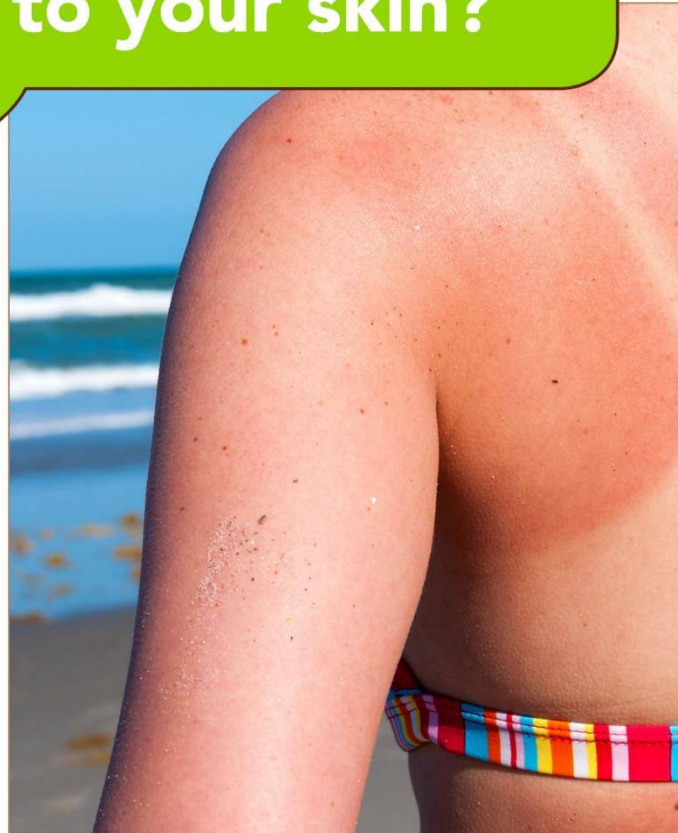

The Sun

What can the sun
do to your skin?

SPOT™ the Sun Smart Animals: Zoo Scavenger Hunt

Many animals have unique ways to protect their skin from the sun's harmful ultraviolet rays. As you walk around the zoo, can you identify these animals based on the pictures and the hints provided about how they are sun smart?

 A	These animals have black feathers around their eyes to absorb the sun's rays, protecting their eyes from sun damage.	 D	This animal likes to roll around in the mud. It's not just for fun! The mud acts like sunscreen and keeps the animal cool, since it does not have sweat glands.
 B	This third largest land mammal protects its skin by producing a sticky, oily substance. This oil keeps the skin from drying out and offers sun protection.	 E	This animal has several humps on its body. Its most protective ones are over its eyes, which act like sun shades to protect its eyes from sun damage.
 C	This all-around has a dark tongue that protects it from getting sunburnt as it reaches up to trees to eat leaves.	 F	The world's longest-lived mammal has a lot of skin to protect from the sun. The first thing they do when they get outside is to stretch out their long, scaly skin to protect themselves from the sun.

BEFORE YOU HEAD TO THE ZOO, MAKE SURE YOU AND YOUR FAMILY ARE BEING SUN SMART TOO!

Wear protective clothing, when possible. This includes long sleeves, pants, a wide-brimmed hat and sunglasses.

Apply a broad-spectrum, SPF 30 or higher sunscreen to all exposed skin before you head out. Remember to reapply every 2 hours while at the zoo.

When you need a break, find a shaded area to rest. Use this time to see which animals you still need to identify for this scavenger hunt.
