COMMERCIAL CREW PROGRAM

2018

Children's Artwork

CALENDAR

NASA's Commercial Crew Program

NASA's Commercial Crew Program is working with American companies to build new rockets and spacecraft that will launch astronauts into space, to places like the International Space Station. The spaceships will launch from Florida and take astronauts about 250 miles above the surface of Earth to perform experiments. Those experiments make our lives better here on the ground and prepare other astronauts for longer missions to places like the Moon and Mars.

Preparing for Flight

Bob Behnken, Suni Williams, Eric Boe and Doug Hurley are training for Commercial Crew flight tests to the International Space Station on Boeing's CST-100 Starliner and SpaceX's Crew Dragon vehicles.

“Working for NASA and being an astronaut is really exciting and it’s fun. I go to work every day and it is something new and exciting, and sometimes it means getting on a rocket and going to space. There are a lot of cool things we do at NASA. It’s not only astronauts who work for NASA, but it’s doctors, scientists, engineers, veterinarians, and many others all working together to make a space mission that allows us to eventually get up on the rocket and go and do the experiments in space on the space station.”

-Suni Williams

ROBERT L. “BOB” BEHNKEN, NASA ASTRONAUT

Hometown: St. Ann, Missouri

Education: Washington University, California Institute of Technology

Flight Training: 1,500 hours in more than 25 aircraft

Time in Space: 29 days

Spacewalks: 6, totaling 37 hours

Missions: Space Shuttle missions STS-123 & STS-130 delivering Dextre, Kibo, Cupola, and Node 3 to ISS

Previous Assignments: Space Shuttle Cape Crusader, CAPCOM, Chief of the NASA

Astronaut Corps

Achievements: National Science Foundation Graduate Research Fellow, NASA Space Flight and Defense Superior Service Medals

Military Experience: USAF Research Laboratory Engineer, Test Pilot School, F-22 Flight Test, USAF Colonel

Hobbies: Backpacking, skiing and learning

SUNITA L. “SUNI” WILLIAMS, NASA ASTRONAUT

Hometown: Needham, Massachusetts

Education: U.S. Naval Academy, Florida Institute of Technology

Flight Training: 3,000 hours in more than 30 fixed wing and helicopter aircraft

Time in Space: 322 days

Spacewalks: 7 totaling 50 hours, 40 minutes – World Record for Women

Missions: STS 116, Expeditions 14/15, STS 117, Russian Soyuz TMA-05M, Expeditions 32/33, Commander of Expedition 33

Previous Assignments: ISS Russian Crusader, Robotics Branch, NEEMO2 Crew Member, Deputy Chief of the Astronaut Office, Director of Operations at the Gagarin Cosmonaut Training Center in Star City, Russia

Achievements: Defense Superior Service Medals, NASA Space Flight medals, Republic of India Padma Bhushan Award and Slovenian Medal for Service, first marathon and triathlon in space

Military Experience: US Navy Captain, CH-46D pilot, USN Test Pilot School graduate and instructor, Marine Air Warfare Training graduate, USN/USMC helicopter test pilot, V-22 chase pilot

Hobbies: Running, swimming, biking, triathlons, windsurfing, snowboarding, bow hunting and yoga

ERIC A. BOE, NASA ASTRONAUT

Hometown: Atlanta

Education: United States Air Force Academy, Georgia Institute of Technology

Flight Training: 5,000 hours in more than 45 aircraft

Time in Space: 28 Days

Miles Traveled: 11.3 million

Missions: STS-126, STS-133

Previous Assignments: Pilot, NASA Director of Operations at the Gagarin Cosmonaut Training Center in Star City, Russia, Deputy Chief of the Astronaut Office and United States Air Force Colonel

Achievements: Delivered the Multi-Purpose Logistics Module Leonardo, the Permanent Multipurpose Module and 4th Express Logistics Carrier to ISS

Military Experience: 55 combat missions over Iraq in support of Operation Southern Watch

Hobbies: Outdoor sports, reading, scuba diving and skiing

DOUGLAS G. “DOUG” HURLEY, NASA ASTRONAUT

Hometown: Apalachin, New York

Education: Tulane University

Flight Training: 5,000 hours in more than 25 aircraft

Time in Space: 28 days

Miles Traveled: 11.8 million

Missions: Space Shuttle missions STS-127 and STS-135 delivering the Japanese Exposed Facility and the Multi-Purpose Logistics Module Raffaello to ISS

Previous Assignments: Pilot, Shuttle Cape Crusader, NASA Director of Operations at the Gagarin Cosmonaut Training Center in Star City, Russia, and Assistant Director for Flight Operations

Achievements: 1st Marine pilot to fly the F/A-18 E/F Super Hornet, last pilot of the Space Shuttle, Legion of Merit

Military Experience: F/A-18 pilot, Weapons and Tactics Instructor, Navy Test Pilot School, F-18 A-F Flight Test, retired USMC Colonel

Hobbies: Family time in the Texas Hill Country and hunting

ASTRONAUTS

NASA's astronauts have many skills and experiences that make them perfect for the variety of jobs they do both in space and on the ground. During their careers, astronauts could pilot a spacecraft, run experiments on the International Space Station, train new astronauts and even help guide other astronauts through challenging work in space from Earth.

Did You Know?

The term "astronaut" derives from the Greek words meaning "space sailor," and refers to all who have been launched as crew members aboard NASA spacecraft bound for orbit and beyond. Astronaut has remained the title for those selected to join the NASA corps of astronauts who make space sailing their career profession. Learn more: <https://www.nasa.gov/astronauts>

ASTRONAUT TRAINING
When astronauts are in space, they must perform physical fitness activities to keep them healthy and strong while living and working in microgravity. They currently can use a stationary bicycle, a treadmill and weight machines.

SPACESUITS

An astronaut's space walk spacesuit is like his or her own personal spacecraft. Spacesuits keep astronauts safe by providing breathable air and keeping them warm and cool. Spacesuits also are pressurized like the inside of a flying airplane so that the astronauts are safe in space. Spacesuits allow the astronauts to be in constant communication with doctors and medical professionals who track their health here on the ground.

SOLAR

ORION

SPACECRAFT
Spacecraft carrying astronauts are stacked on top of rockets before launching them into space. The Apollo spacecraft was very different from the space shuttle, and both are very different from the commercial crew spacecraft that astronauts will use to fly to the International Space Station. Today's commercial crew spacecraft will be lightweight, but tough enough to withstand the dangers of space.

Did You Know?

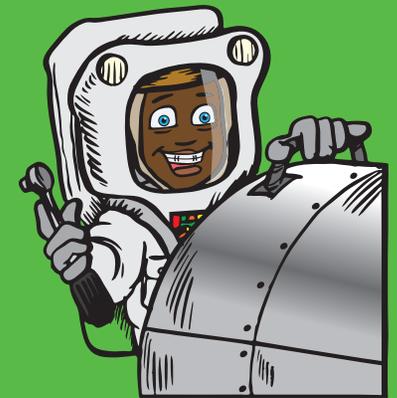

NASA's Commercial Crew Program has two companies, Boeing and SpaceX, building new spacecraft to carry astronauts to the International Space Station. NASA also is working on the Orion spacecraft to launch aboard the Space Launch System to take astronauts on journeys to the Moon and Mars.

April
2018

ROCKETS

The commercial crew rockets that will carry astronauts to the International Space Station will be smaller than NASA's Saturn V rocket and the space shuttle fleet. They don't have to go as far as the Saturn V and don't have to carry as much as the space shuttle, so they don't need to be as big. Think of it like going to visit your friends. You would take a bus to see someone in another state, but you could just take your bike to visit someone who lived down the street.

LAUNCH DAY IN FLORIDA

The rumble . . . the glow . . . the excitement! Every time NASA has launched people off the surface of Earth and into space, it has been from Florida's Space Coast. In the next couple years, we will see commercial crew spacecraft rockets glow orange and make huge plumes of smoke as astronauts launch to the International Space Station from Florida. In the 2030s, we also will see astronauts launching from Florida's Kennedy Space Center as they begin their journey to Mars.

Did You Know?

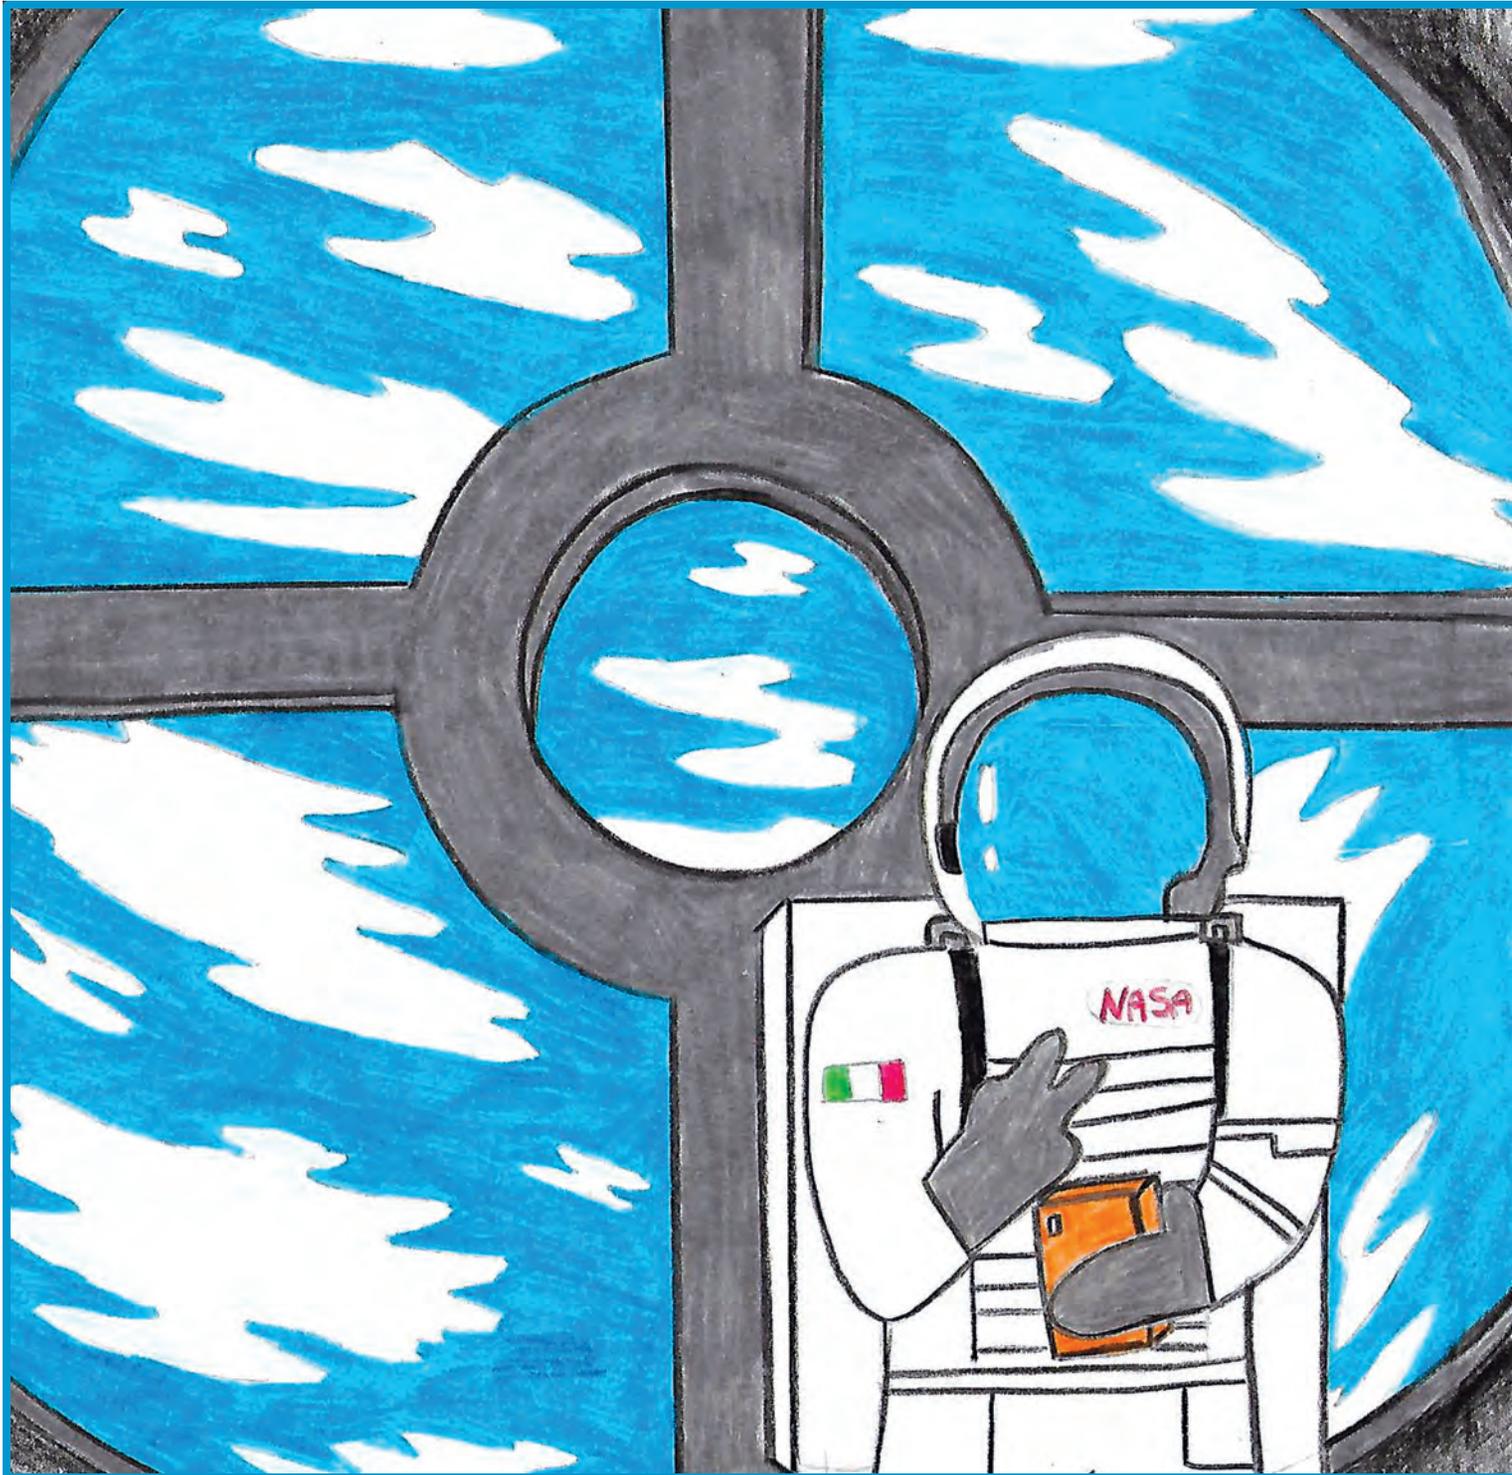

Did you know that Florida is known as the Space Coast? This is because this is the area of the United States where many of the nation's human and robotic explorers have started their journey of exploration. Commercial spacecraft delivering cargo to the International Space Station start their trips from the Space Coast. Soon, it will host astronaut launches on commercial rockets for NASA missions and NASA's new heavy-lift rocket, the Space Launch System, to take people to new destinations in our solar system!

INTERNATIONAL SPACE STATION

Look up! The International Space Station is orbiting about 250 miles above the surface of Earth, 24 hours a day, seven days a week, 365 days a year, at 17,500 miles every hour. On board, astronauts conduct very important experiments that help us here on Earth. They also are learning how to live for long periods of time in space, which will help future astronauts on their journey to Mars. Commercial crew spacecraft will carry up to four crew members on NASA missions to the station so that so important experiments can continue. Show us your best drawing of the space station.

Fun in Space
David, 9
Alexandria, VA

Did You Know?

The International Space Station looks like an airplane or a very bright star moving across the sky, except it doesn't have flashing lights or change direction. It also moves considerably faster than a typical airplane (airplanes generally fly at about 600 miles per hour; the space station flies at 17,500 miles per hour). The International Space Station is the third brightest object in the sky and easy to spot if you know when to look up. Sign up to find out when you can see the station from your location: [https:// spotthestation.nasa.gov/](https://spotthestation.nasa.gov/)

LIVING AND WORKING IN SPACE

For nearly 20 years, astronauts have lived and worked in space on the International Space Station. They do all the same kinds of things you do here on Earth! They sleep and eat and take baths and work hard and exercise! A lot of their work is about studying how to survive in locations far from Earth, like Mars!

WHAT WOULD YOU TAKE FROM HOME?
Today, every astronaut goes to space to do very special work. But because they're gone so long, they each take some personal items to remind them of home or small things to do during their limited free time. Some of those things astronauts take include musical instruments, MP3 players, or small toys.

Selva, 11
Tamil Nadu, India

Did You Know?

Astronauts have to think carefully about what personal items they take with them when they are in space, far from home. To stay entertained, the astronauts can listen to music or do other things (hobbies, activities, interests, etc.) that they bring with them. Find out what would you take: https://www.nasa.gov/audience/foreducators/k-4/features/A_What_Would_You_Bring.html

SPACE FOOD

There are no grocery stores in space. When new supplies are sent to the International Space Station, there's always some fresh food like fruits and vegetables, but almost everything is prepackaged so it will last a long time. The goal is for astronauts to eventually grow crops that can help supplement their nutrition. We've also discovered growing plants in space can make the astronauts happy since it reminds them of Earth.

Did You Know?

Food is such an important part of our lives and culture. With so much variety available, it's hard to imagine choosing meals or being limited when embarking on a 6-month mission on the International Space Station. Learn more about NASA's food scientists helping prepare food for space: <https://www.nasa.gov/content/space-food-systems>. Recent crews have been growing their own vegetables and even get the chance to eat them: <https://www.youtube.com/watch?v=RqtAK-FBtXU>.

RETURNING TO EARTH
What goes up, must come down! After flying through space and re-entering the Earth's atmosphere at about 17,500 miles per hour, spacecraft have to land slowly and smoothly to protect the astronauts and science experiments they carry. Commercial crew engineers are looking at different ways to land with parachutes, airbags, like airplanes, or using rocket engines.

Did You Know?

For NASA's Commercial Crew Program, Boeing's Starliner and SpaceX's Crew Dragon will land back on Earth using different methods after leaving the International Space Station. The Starliner will land on land and the Crew Dragon will land in the ocean.

Returning to Earth

Stephen, 8 Holywood, N. Ireland

NASA's Commercial Crew Program is working with American companies to build new rockets and spacecraft that will launch astronauts into space, to places like the International Space Station. These spaceships will launch from Florida and take astronauts about 250 miles above the surface of Earth to perform experiments. Those experiments make our lives better here on the ground and prepare other astronauts for longer missions to places like the Moon and Mars.
