Smithsonian Institution

1. One ingredient of soil is rock, crumbled into tiny pieces. Rock is the most DURABLE stuff in the natural world. So what causes it to crumble? Weather, for one thingwind, rain, changes of temperature. The breakdown doesn't happen overnight, but over a DURATION

the root DUR means

a. to crumble b. to break

c. to last

of thousands of years.

Our planet is four thousand miles deep. The soil on top of our planet can be just a few feet or a few inches deep. But all life on land depends on that thin skin of soil. Plants take root and grow in soil, and plants feed all life. Some

It's no wonder that our whole planet takes its name from the soil, otherwise

Learn more about the soil in this guiz, in which you unearth the

known as earth. Let's just be grateful that we don't live on the planet Dirt.

meanings of a few words by looking at their common roots.

animals only eat plants. Other animals eat animals that eat plants.

2. Soil is also COMPOSED of living things, and living things that have died. Living and dead work in COMMON cause. Living things **DECOMPOSE** dead plants and animals by feeding on them. This puts nutrition into the soil so that new plants can grow.

the root COM means

a. together

b. apart

c. alive

3. There are more living things in one spoonful of soil than there are people in the world. Most of those living things are MICROBES, such as bacteria, which can only be seen with a MICROSCOPE.

the root MICRO means

SmithsonianEducation.org/Root

a. living in soil b. very large

c. very small

4. A MICROBIOLOGIST can find amazing **BIOGRAPHIES** in that spoonful of soil. Some soil microbes can produce **ANTIBIOTICS**, medicines that kill harmful germs. Some can

the root BIO means

a. science b. life c. health

Strangely, soil got its name from only one living thing. In the Old French language, a soil was a wallow for pigs—the place where they went to cool down.

Scientists use the word dirt for the mineral part of soil—

air, water, rotting plants and roots, and billions of living

things. Dirt is sometimes lifeless. Soil is always alive.

crumbled rocks. By soil, they mean a mixture of minerals,

in the soil.

the root CLIN means

a. lean toward b. stand up

c. flee from

Find these ten words. They go across, down, or diagonally. Some are spelled

backwards. Helpful tip: Look first for

common, decompose,

microbe, microbiology,

durable, duration,

antibiotic, biofuel,

incline, recline

common roots.

There's a new exhibition on soil at the Smithsonian's National Museum of Natural History in Washington, D.C. It's called Dig It! The Secrets of Soil. An online version is at forces.si.edu/soils.
